

Failed matches (a pattern collapsing in one seed) are dropped from the mean: 1 of 15 at nP=5, 3 of 21 at nP=6, 1 of 27 at nP=9; none at nP=8.  
Distributed CoGAPS returned 7 consensus patterns for the requested nP=6.

top-50 PatternMarker genes per pattern, hypergeometric against the 2,038-gene HVG background.  
Curated panel sizes: vascular stabilizing 11, synthetic contractile 8, basement membrane 13, fibroblast-like 9, activated migratory 7, inflammatory 16.

8 of 8 nP=8 patterns matched an nP=9 pattern; the argmax curated program agrees for 8 of 8. The additional pattern at nP=9 (P4) is unmatched and correlates weakly with every curated panel (max rho 0.16). Row labels give the leading curated program at nP=8.
